RESEARCH FIELDS

Primary: Public Finance; Development

Secondary: Finance

EDUCATION

Paris School of Economics (PSE), Paris 1 Panthéon-Sorbonne University

Sep 2022 - Present

Ph.D. candidate

Committee: Prof. Liam Wren-Lewis (adv.), Gabriel Zucman, Pierre Bachas

University of California Berkeley

Aug 2024 - Dec 2024

Visiting Prof. Emmanuel Saez

Paris School of Economics (PSE), Paris 1 Panthéon-Sorbonne University

Sept 2019 - Sept 2021

MSc in Analysis and Policy in Economics (APE), Highest honors

Master thesis: “Regional Inequality in Brazil” supervised by Thomas Piketty

Pontificia Universidade Catolica do Rio de Janeiro (PUC-Rio)

Jan 2015 - June 2019

Bachelor of Science in Economics, Top 5%

WORKING PAPERS

How Do Individuals Respond to an Offshore Tax Amnesty? Evidence from Brazil - Job Market Paper

(with Bernardus Van Doornik)

Abstract: This paper analyzes how capital disclosure, repatriation, and allocation change in response to increased offshore monitoring. It leverages Brazil’s 2016 offshore tax amnesty, implemented ahead of the expansion of monitoring capacity under the global Automatic Exchange of Information framework. Using administrative microdata on the universe of reported foreign assets, we find that 21,000 individuals disclosed \$59 billion (3.4% of GDP) in the amnesty. Participation was strongly correlated with wealth, reaching 21% among the top 0.001%. However, using microdata on foreign exchange, we show that net capital repatriation was limited, averaging only 20% of disclosed capital. Most capital remained abroad, driven by high foreign returns and diversification benefits. Tracking repatriated capital, we find it flowed mainly into domestic fixed income rather than the real economy. Consequently, firms owned by amnesty participants showed no growth in employment or revenues, regardless of repatriation. These results suggest that while offshore monitoring and amnesties effectively uncover hidden wealth, they are insufficient to shift capital allocation back toward developing countries.

Equity versus Efficiency of Indirect Taxes: Evidence from a Large Reform in India

(with Pierre Bachas and Pulak Ghosh)

Abstract: When income taxes and transfers are constrained, should governments redistribute through higher taxes on luxury goods? To quantify this equity-efficiency tradeoff we exploit a large VAT reform in India that reduced tax rates on a broad set of non-essential goods. Rate cuts are partially passed through to consumer prices, generate moderate quantity responses, and induce little firm-product entry and exit or product misclassification. Combined with evidence on the concentration of luxury consumption among higher-income households, our estimates imply that luxury goods should face substantially higher tax rates than standard goods under India’s current tax and transfer system. We finally ask what it would take for uniform commodity taxation to become optimal. Achieving this benchmark requires simultaneously broadening the income tax base, increasing its progressivity, and sharply improving transfer targeting—well beyond current practice in most developing countries.

Tax progressivity and inequality in Brazil: Evidence from integrated administrative data

(with Theo Palomo, Davi Bhering, Thiago Scot, Pierre Bachas, Luciana Barcarolo, Celso Campos, Javier Feinmann, Leonardo Moreira, and Gabriel Zucman)

Abstract: We combine population-wide administrative micro-data to provide new estimates of income inequality and effective tax rates by income groups in Brazil, capturing all income and all tax payments. Our data allow us

to link businesses to their owners and thus to allocate business income and associated taxes to the corresponding individual firm owners. The paper provides sharp upward revisions to official inequality estimates: the top 1% earns 27.4% of total income in 2019, one of the highest level recorded in the world. The tax system, which relies heavily on consumption taxes, is regressive: while the average tax rate in the economy is 42.5%, this rate falls to 20.6% for million-dollar earners (roughly the top 0.01% of the distribution), due to the non-taxation of dividends and provisions that reduce corporate tax liabilities. We provide evidence suggesting that inequality in developing countries may be systematically underestimated, as even in Brazil—where dividends are untaxed, and hence incentives to retain income within companies are limited—attributing profits to business owners substantially raises income inequality.

GRANTS AND SCHOLARSHIPS

Stone Center on Global Wealth Dynamics Granted for fourth-year PhD funding	<i>Sep 2025 - Aug 2026</i>
--	----------------------------

EUR research grant from the Paris School of Economics Granted to develop Brazil’s Offshore Tax Amnesty project	<i>Jan - Nov 2024</i>
--	-----------------------

Doctoral School ED 465 Economics, Panthéon-Sorbonne (EPS) Granted for 3-year doctoral contract	<i>Sep 2022 - Aug 2025</i>
--	----------------------------

Paris School of Economics master’s scholarship Granted on the basis of outstanding performance in the master’s first year	<i>Sep 2020 - Aug 2021</i>
---	----------------------------

Full scholarship to pursue BA studies in economics at PUC-Rio Granted by BTG Pactual on the basis of outstanding performance in the entrance examination in 2015	<i>Jan 2015 - Jul 2019</i>
--	----------------------------

WORK EXPERIENCE

IMF Internship Program

Working on public finance in the Western Hemisphere Department.

Jun 2025 - Aug 2025

Full-time consultant at the World Bank Group

Working for Dr. Pierre Bachas and Prof. Lucie Gadenne.

Sep 2021 - Aug 2022

Research assistant at the Jameel Poverty Action Lab (J-PAL)

Working for Prof. Roland Rathelot

June 2020 - Aug 2020

Full-time intern at BTG Pactual

BTG Pactual is Latin America's largest investment bank

Aug 2018 - May 2019

Research assistant at PUC-Rio

Working for Prof. Juliano Assunção and Dr. Máina Celidonio

Sep 2016 - Aug 2017

TEACHING EXPERIENCE

Teaching assistant for Microeconomics course

Paris 1 Panthéon-Sorbonne University (in French)

Jan 2023 - May 2023

Teaching assistant for Microeconomics course

PUC-Rio

Sep 2015 - Aug 2016

SKILLS

Languages	Portuguese (native), French (fluent), English (fluent), Spanish (fluent)
Computer	R, Stata, LaTeX

PERSONAL

Citizenship	Brazilian and French
Date and place of birth	13/09/1997, Volta Redonda, Brazil
Address	161 Rue de Tolbiac, 75013 Paris, France
